

## Medical Record Summary - Revised for Complaint

### Executive Summary

Plaintiff Meho Camil Lizde, a professional truck driver with no prior significant medical history, sustained serious injuries as a result of a **semi-truck collision on July 14, 2014**, on southbound I-15 in Beaver County, Utah. The accident occurred when a slow-moving semi-truck, operated by Defendant Justin S. Luther and owned by Defendant New Prime, Inc., caused Plaintiff to take evasive action, leading to a high-impact collision.

Emergency medical personnel transported Plaintiff to **UH Hospitals and Clinics**, where an initial trauma assessment revealed multiple injuries. These included **fractures of the thoracic and lumbar vertebrae (T7 and L2), right clavicle fracture, and a traumatic brain injury (TBI) with loss of consciousness at the scene**. Additional imaging studies, including X-rays, CT scans, and MRIs, confirmed **soft tissue injuries, significant whiplash-associated disorders, and a contusion to the right ribcage with possible pulmonary complications**.

Following the emergency department evaluation, Plaintiff was admitted for further neurological and orthopedic management under the trauma and neurosurgery teams. Treatment included **pain management, immobilization with a thoracolumbar brace (TLSO), and physical therapy to restore functional mobility and balance**. Plaintiff exhibited persistent pain, dizziness, and cognitive difficulties suggestive of post-concussive syndrome. Therapy sessions focused on spine precautions, mobility training, and neurocognitive rehabilitation. Discharge planning emphasized continued **outpatient therapy and long-term monitoring for potential chronic pain and neurological deficits**.

Overall, Plaintiff's prognosis remains **guarded, with ongoing medical care required for pain management, neurological recovery, and rehabilitation**.

---

### Chronology by Date

#### 07/14/2014 - UH Hospitals and Clinics - Emergency Department Admission

- Transported via ambulance following high-impact collision on I-15.
- Loss of consciousness at the scene.
- Primary complaints: severe neck and back pain, right shoulder pain, dizziness, and confusion.
- Initial imaging: X-ray and CT confirm **T7 and L2 compression fractures, right clavicle fracture, and evidence of mild intracranial trauma**.
- Admitted under trauma and neurosurgery teams for continued management.

#### 07/15/2014 - UH Hospitals and Clinics - Neurology & Orthopedic Consultation

- Neurological assessment: persistent headache, dizziness, and cognitive slowing.
- Orthopedic findings: significant spinal trauma requiring brace stabilization.
- Plan: TLSO brace for lumbar stability, pain management, and continued observation.

#### **07/16/2014 - UH Hospitals and Clinics - Occupational Therapy Evaluation**

- Patient exhibits **difficulty with balance, functional mobility, and self-care due to pain and neurological symptoms.**
- Cognitive assessment: mild impairments in memory and processing speed.
- Therapy initiated: BADL retraining, neurocognitive therapy, and mobility exercises.

#### **07/18/2014 - UH Hospitals and Clinics - Physical Therapy Evaluation**

- Patient experiencing ongoing **right-sided weakness and pain.**
- Exercises focused on gait stability, spinal protection, and functional rehabilitation.
- Discharge recommendation: **outpatient therapy with continued monitoring for neurological recovery.**

---

#### **Medical Outlook & Continuing Care**

- **Continued pain management and neurological monitoring** required.
- **Physical and occupational therapy** to address mobility, cognitive deficits, and pain symptoms.
- Risk of **chronic pain and long-term neurological impairments.**

Plaintiff remains under medical supervision, with ongoing treatment necessary for recovery from injuries directly resulting from the semi-truck collision.
